

SYSTEM AND METHOD FOR DISPLAYING STATUS OF BACKGROUND WORKER
THREADS

Abstract of the Disclosure

5 A system for displaying the status of a plurality of
threaded tasks operating in the background includes a status
bar; a progress control bar in the status bar for a primary
task operating in the background and including a progress
bar and first and second action buttons; the progress bar
10 visually representing progress of a primary background
operation; the first action button being selectable by a
user for initiating an action with respect to the primary
background operation and the second action button being
selectable by a user for alternately displaying and
15 canceling a drop list of secondary progress control bars for
secondary tasks also operating in the background.
